

A system dynamics model of city hubs

A case study in Stockholm

Claudia Andruetto

**ITRL – INTEGRATED TRANSPORT
RESEARCH LAB**

KTH ROYAL INSTITUTE OF TECHNOLOGY

Context

Transportation of goods

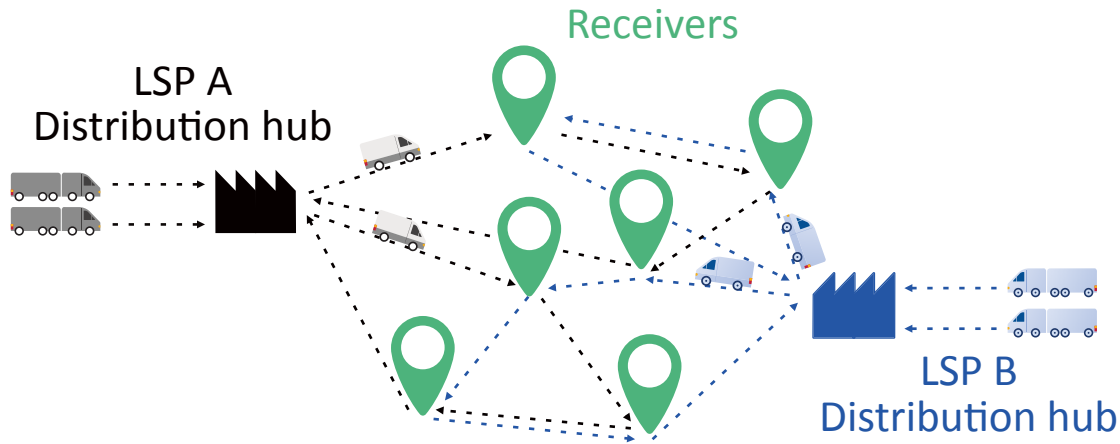

Currently unsustainable

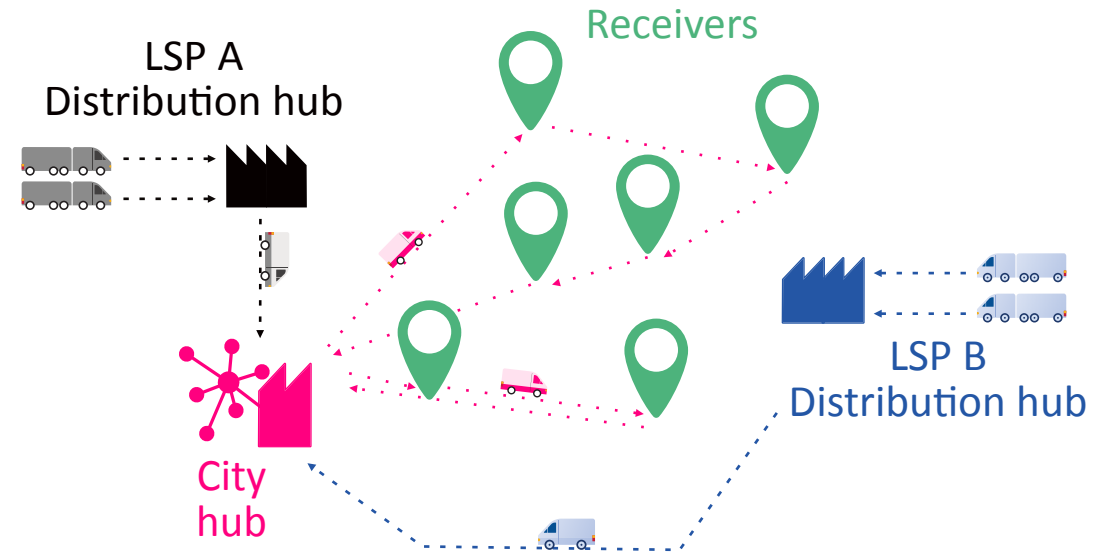

Urban environment

City hubs as one possible solution

a) System without city hubs

b) System with city hubs

Distance travelled

Up to 40-65% decrease

Fill rate

Up to 30-65% increase

Delivery time

Total costs

Problem formulation

City hubs are a possible solution to the negative externalities of the urban logistics system

However, city hubs have not so far been exploited to their potential.

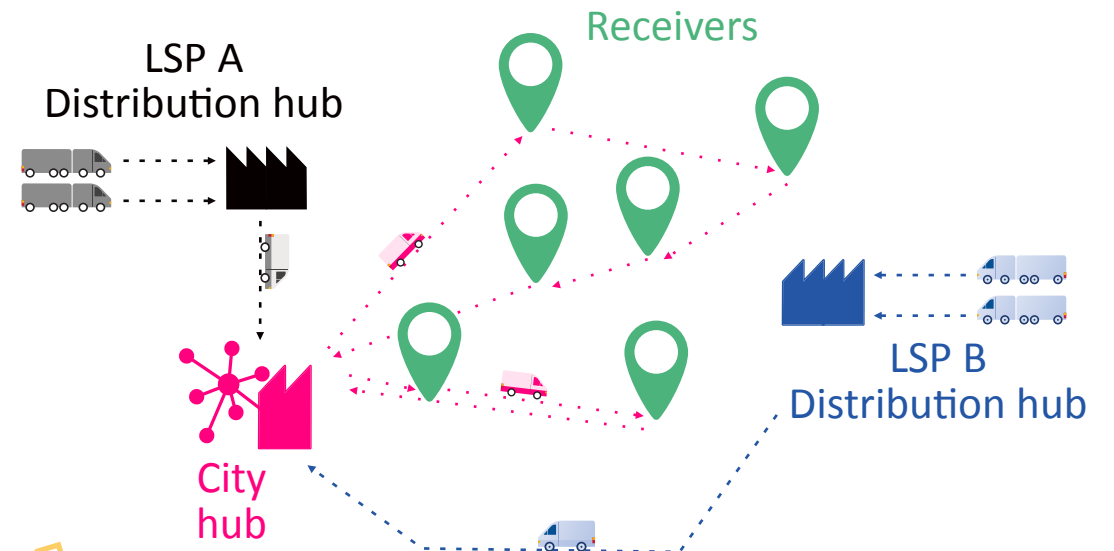

What policies/decisions could help the implementation of city hubs?

Modelling the transition

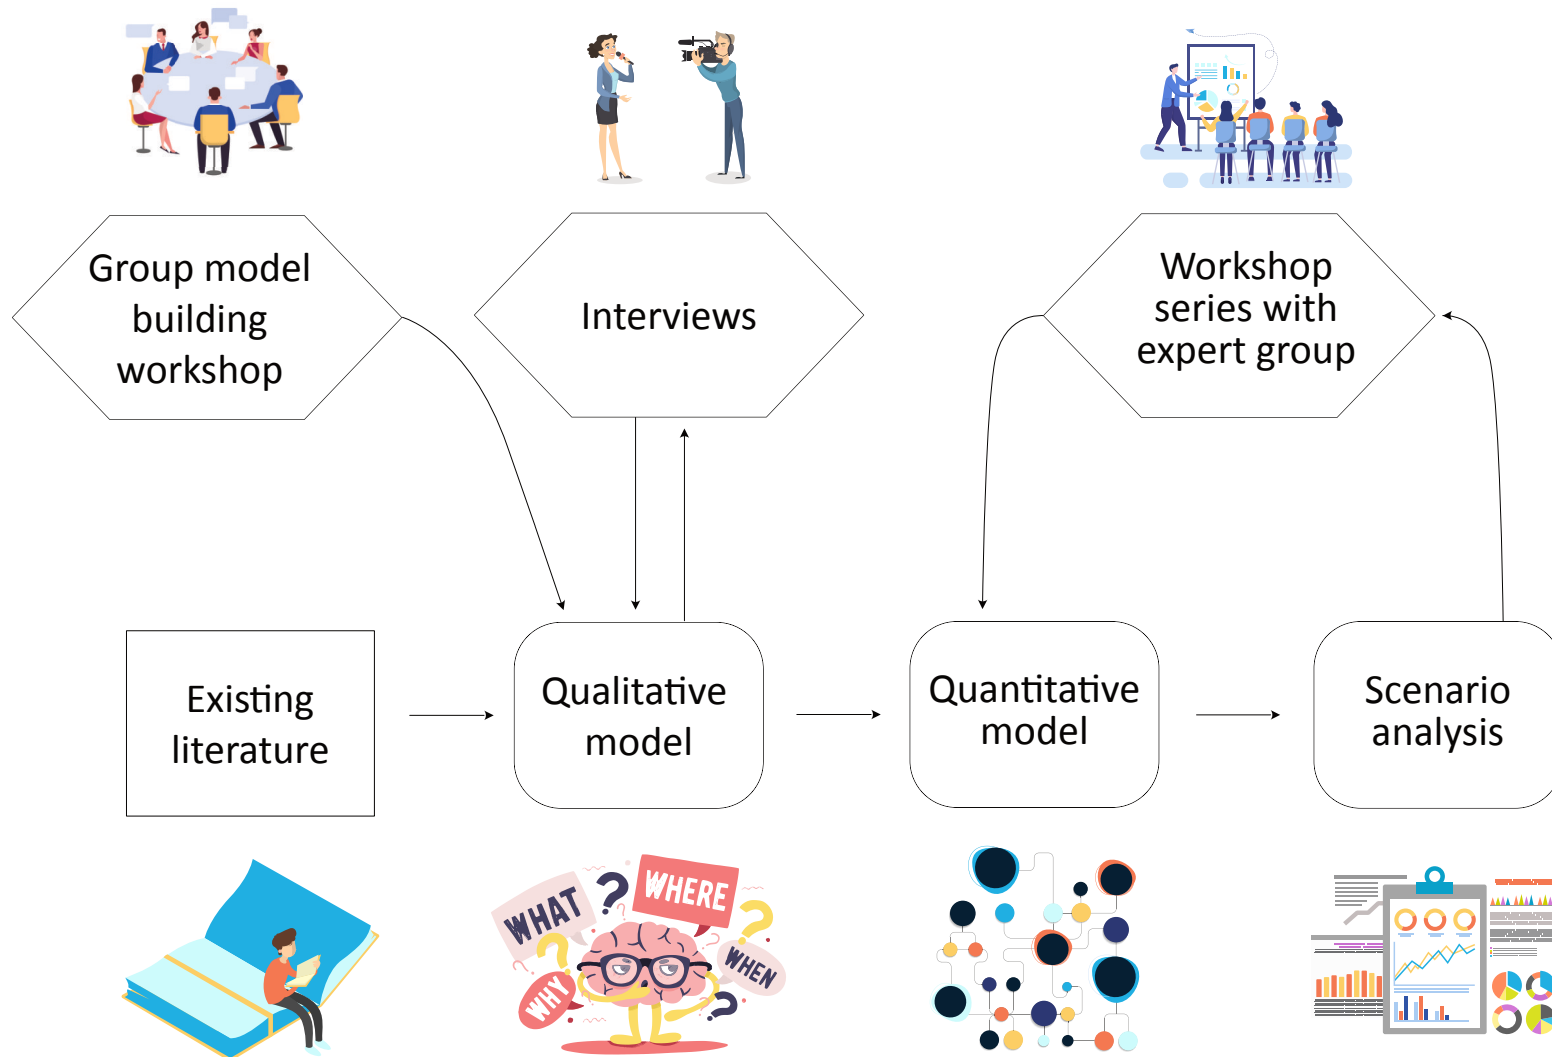

a) System without city hubs

b) System with city hubs

System dynamics method

Model structure

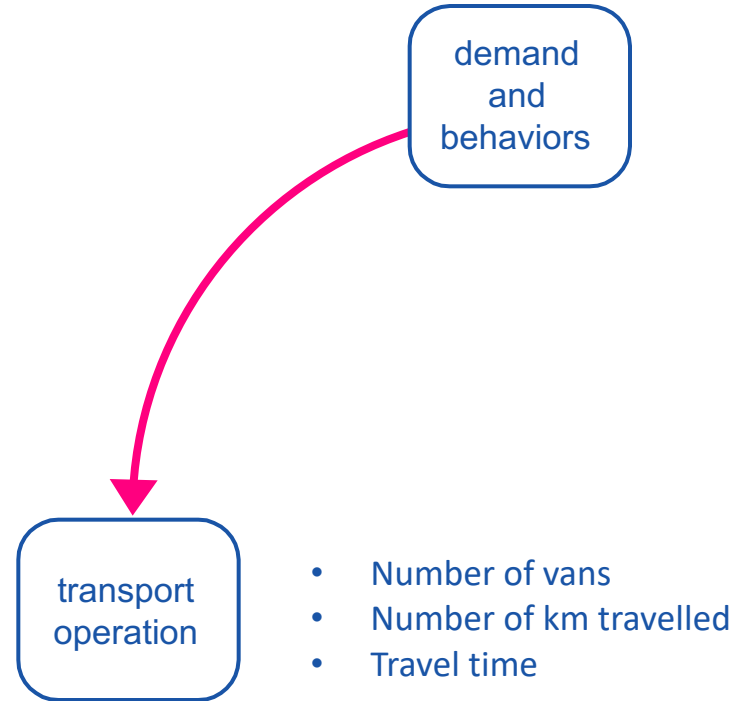

demand
and
behaviors

- Demand in the area
 - Number of packages → ~ **25000 packages/month**
- Number of actors in the area
 - Number of LSPs
 - Number of receivers

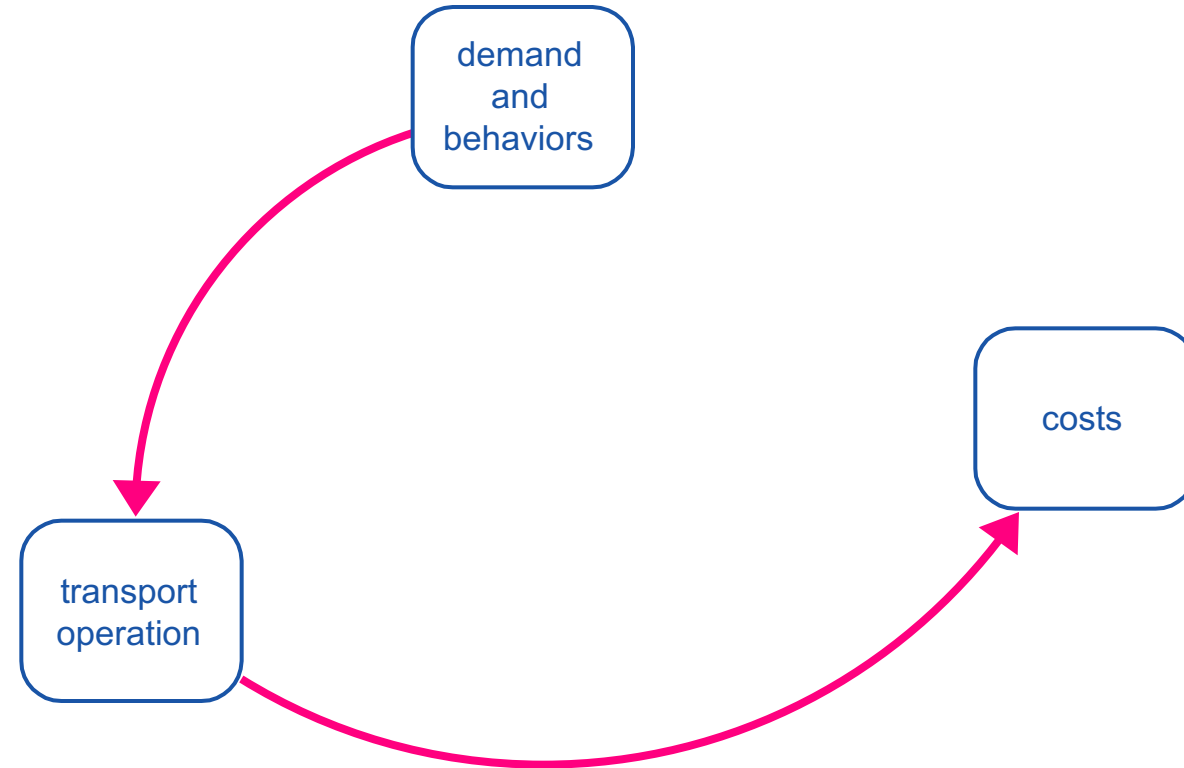

Model structure

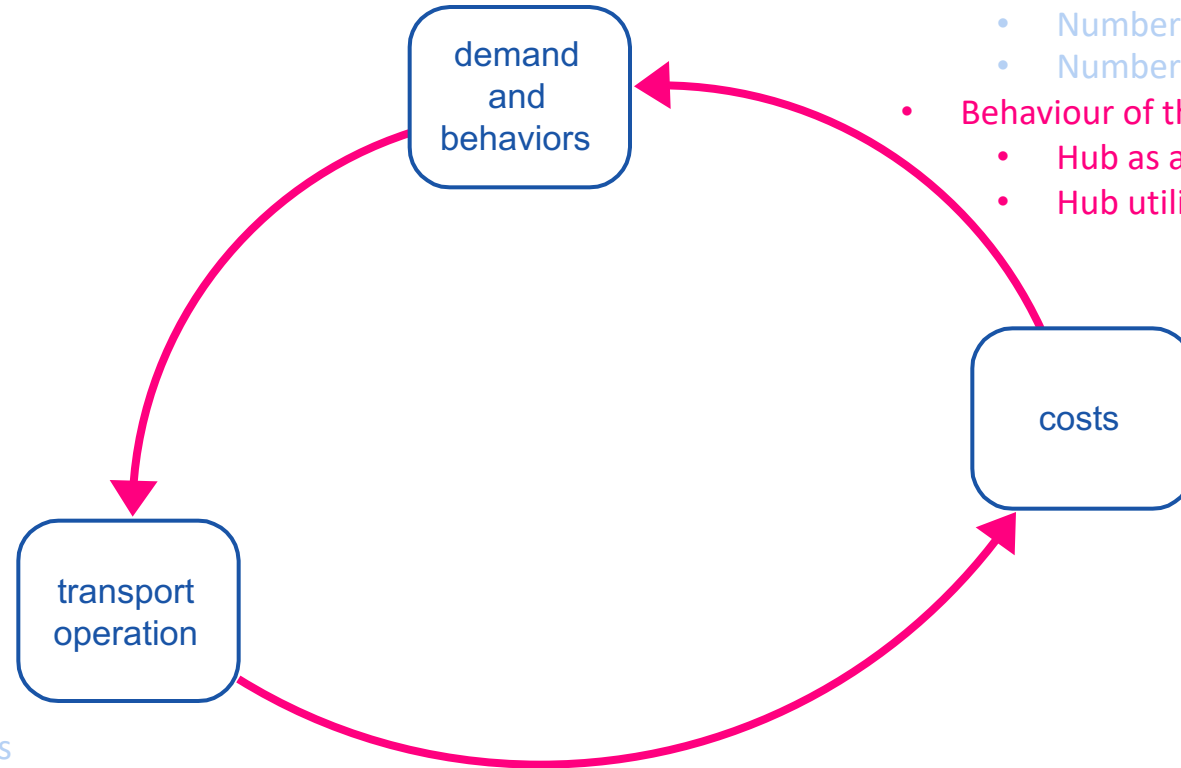

Model structure

- Total costs
 - Cost per km
 - Cost per hour
 - Cost per vehicle

Model structure

HUB INTRODUCTION

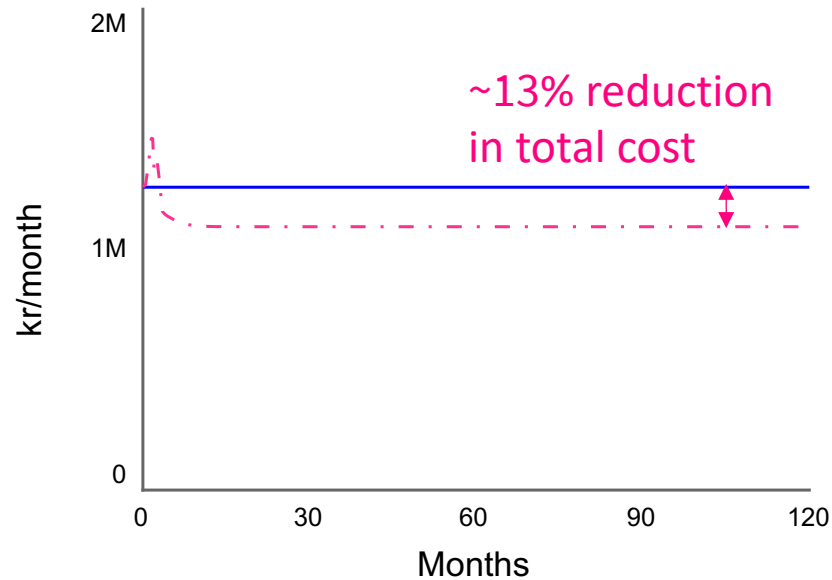

- Demand in the area
 - Number of packages → 25000 packages/month
- Number of actors in the area
 - Number of LSPs → 10 LSPs
 - Number of receivers → 100 receivers
- Behaviour of the actors in the area
 - Hub as additional actor
 - Hub utilisation

- Total costs
 - Cost per km
 - Cost per hour
 - Cost per vehicle
- Cost of the hub
- Revenue stream
 - Receivers fee
 - LSP fee
- Profit of the hub logistic provider

- Number of vans
- Number of km travelled
- Travel time
- Hub vans
- Hub km travelled
- Hub travel time

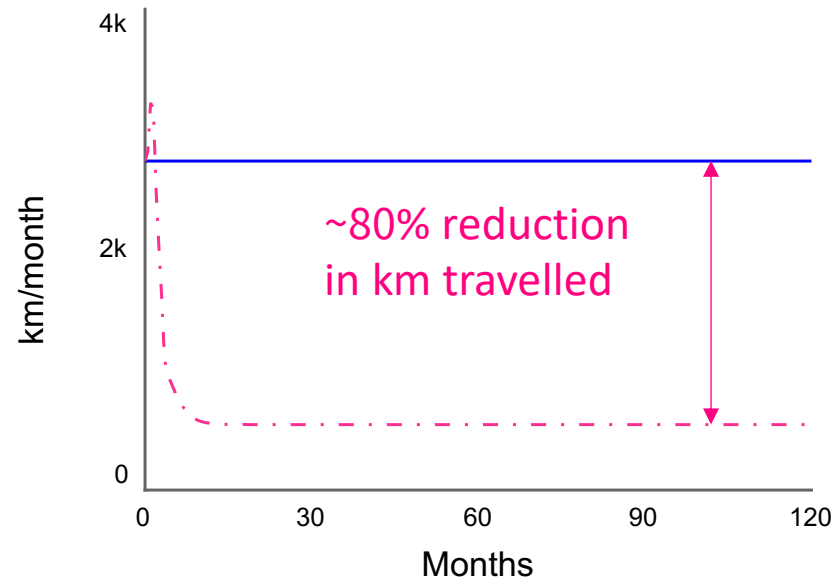

Reductions with hub

Total cost

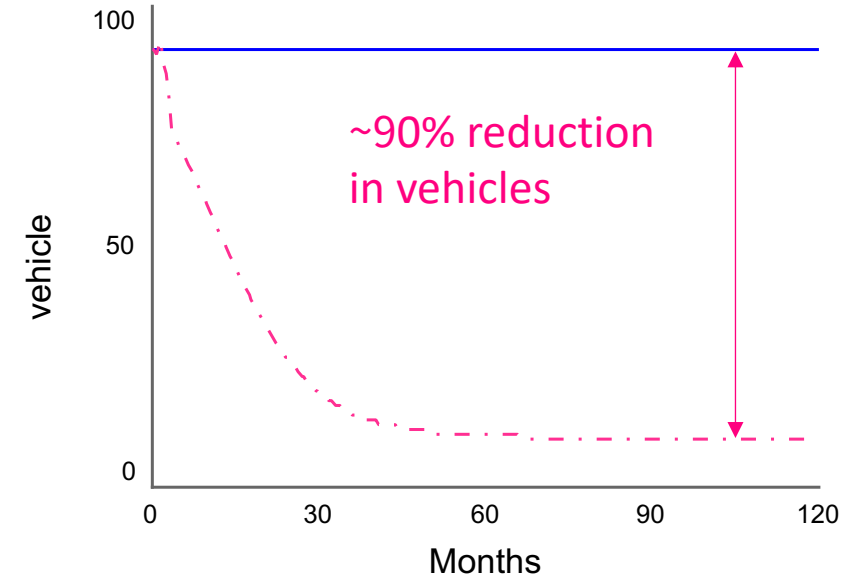

— Base scenario
- - - Full hub utilisation

Total km travelled in the area

— Base scenario
- - - Full hub utilisation

Total number of vehicles in the area

— Base scenario
- - - Full hub utilisation

Scenarios

Logistic Service Providers (LSPs)

Scenario 1

City hub

Scenario 2

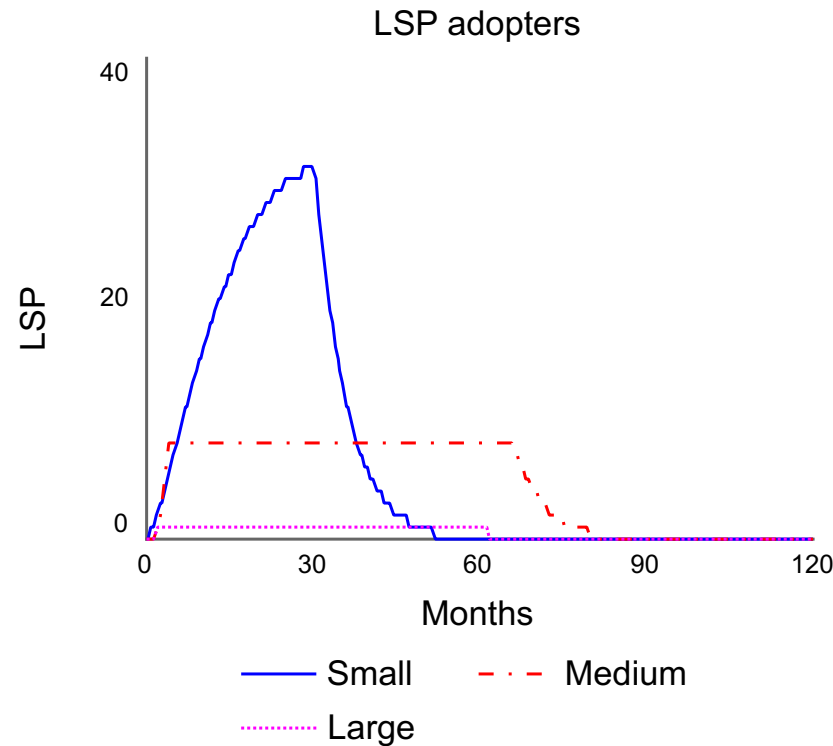

Receivers

Scenario 3 & 4

Scenario 1 – LSP

Input data

Advertisement towards LSP	10% effectiveness
Initial LSP fee	0 kr/month

Scenario 1 – LSP

Input data

Advertisement towards LSP	10% effectiveness
Initial LSP fee	0 kr/month

~80% reduction at t0

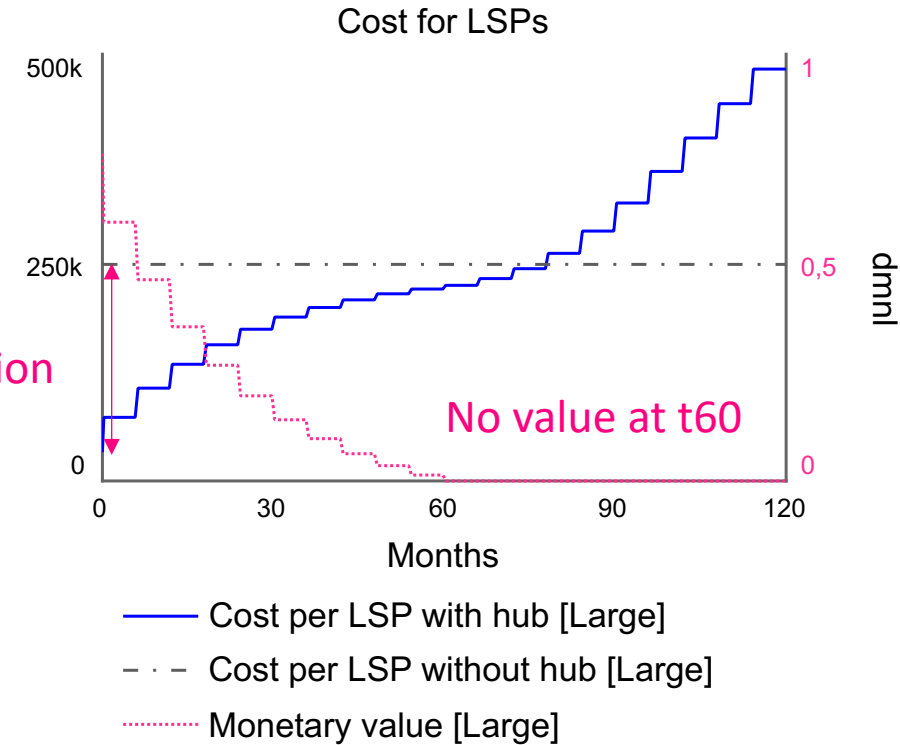

Scenario 1 – LSP

Input data

Advertisement towards LSP	10% effectiveness
Initial LSP fee	0 kr/month

~85% reduction at t0

Scenario 2 - Receivers

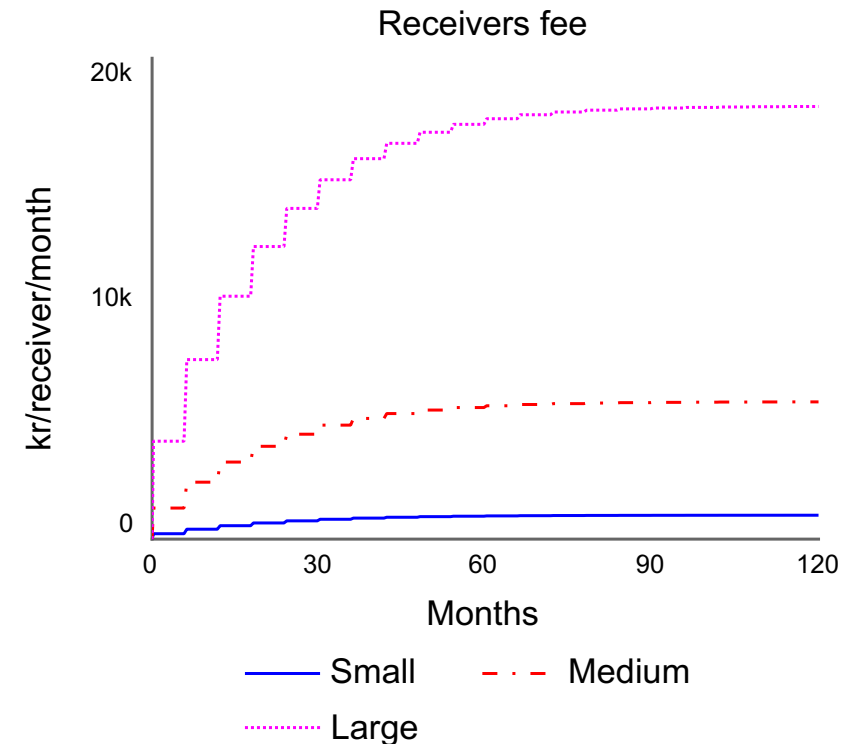

Input data

Advertisement towards receivers	10% effectiveness
Initial receivers fee	0 kr/month

Final receiver fees

- Small: 992 kr/month
- Medium: 5700 kr/month
- Large: 18000 kr/month

Scenario 3 – LSPs and Receivers

Input data

Advertisement towards LSP 10% effectiveness

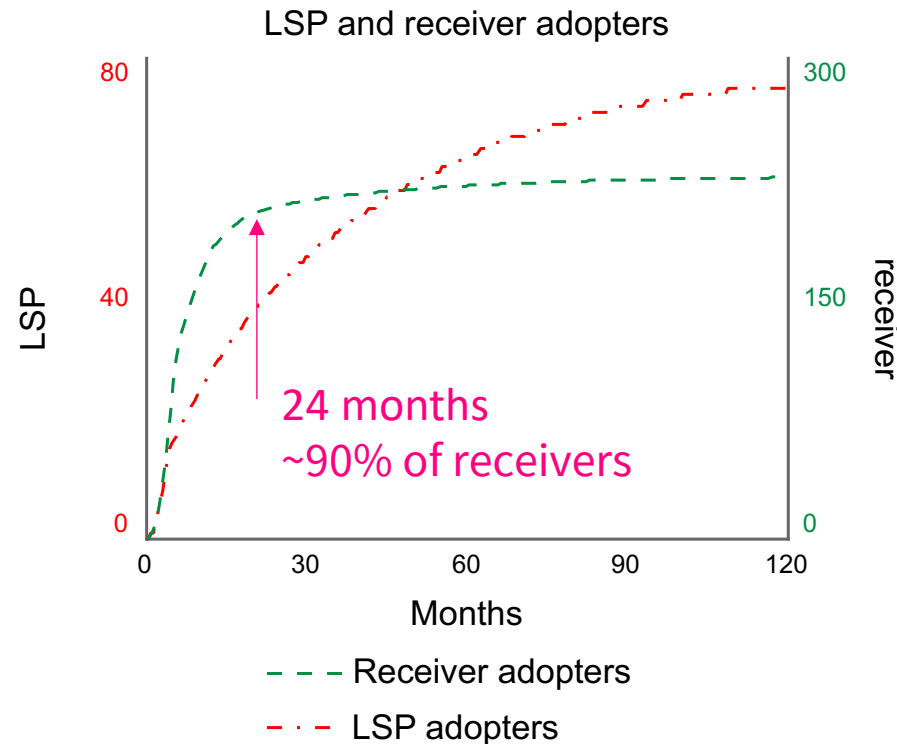

Initial LSP fee 0 kr/month

Advertisement towards receivers 10% effectiveness

Initial receivers 0 kr/month fee

Final receiver fees

- Small: 563 kr/month
- Medium: 3240 kr/month
- Large: 10200 kr/month

Scenario 3 – LSPs and Receivers

Input data

Advertisement towards LSP 10% effectiveness

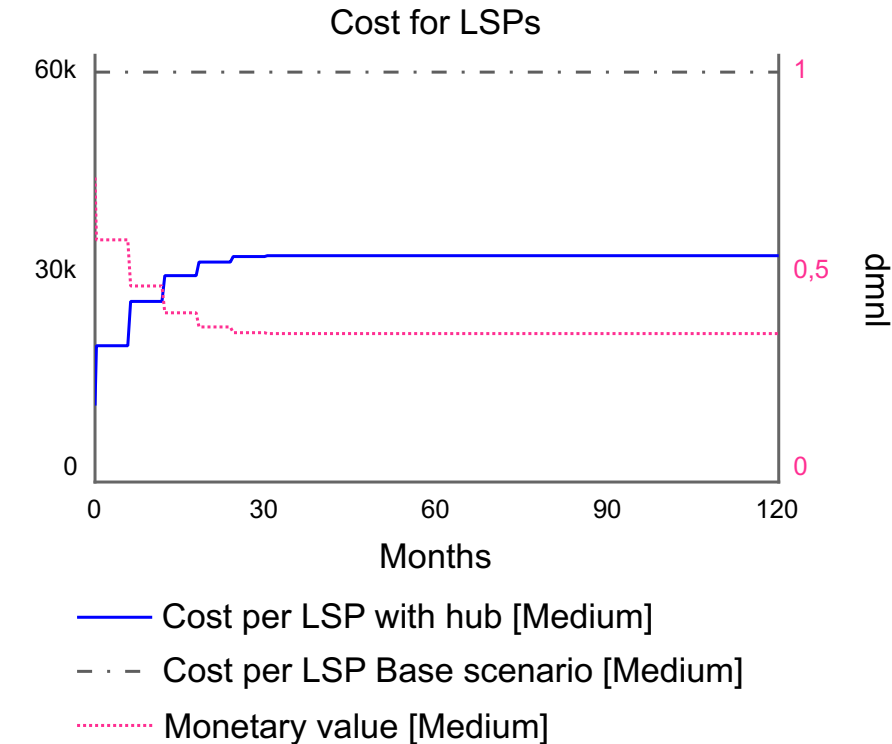

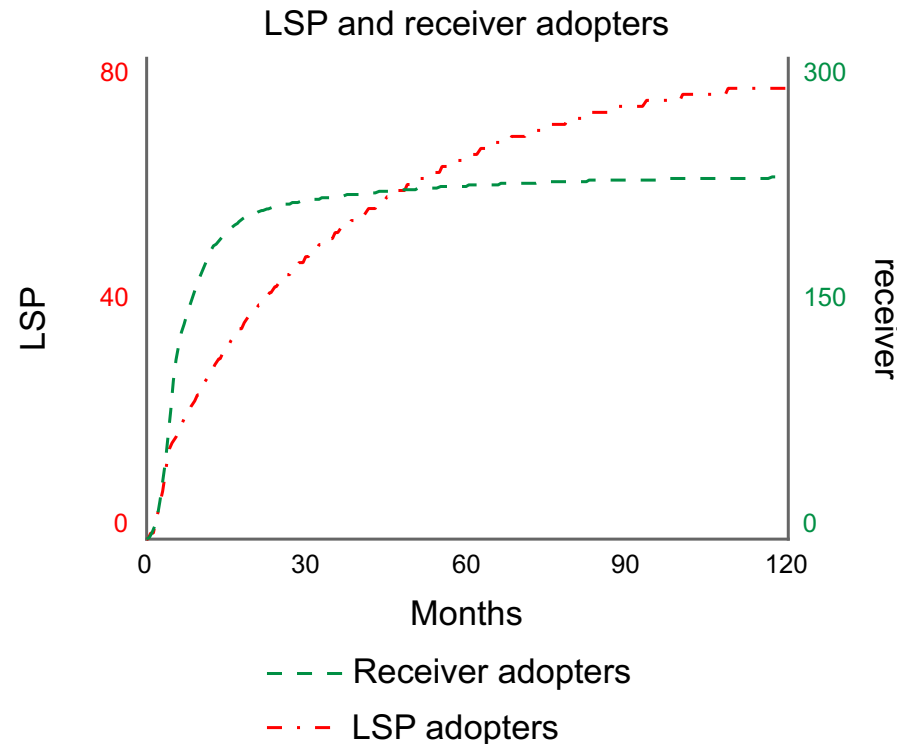

Initial LSP fee 0 kr/month

Advertisement towards receivers 10% effectiveness

Initial receivers 0 kr/month fee

Final receiver fees

- Small: 563 kr/month
- Medium: 3240 kr/month
- Large: 10200 kr/month

Scenario 4 – LSPs and Receivers

Input data

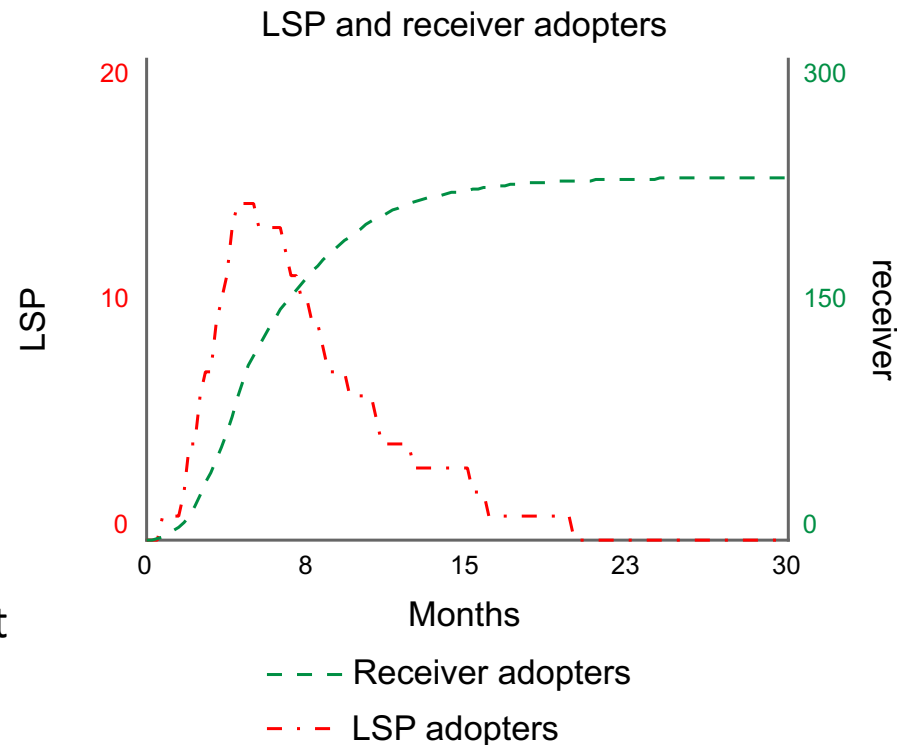

Advertisement towards LSP	10% effectiveness
---------------------------	-------------------

Initial LSP fee	0 kr/month
-----------------	------------

Advertisement towards receivers	10% effectiveness
---------------------------------	-------------------

Initial receivers fee	0 kr/month
-----------------------	------------

Different assumption:
The LSP know about the cost reduction without hub

Scenario 4 – LSPs and Receivers

Input data

Advertisement towards LSP 10% effectiveness

Initial LSP fee 0 kr/month

Advertisement towards receivers 10% effectiveness

Initial receivers 0 kr/month fee

Different assumption:
The LSP know about the cost reduction without hub

Final receiver fees

- Small: 992 kr/month
- Medium: 5700 kr/month
- Large: 18000 kr/month

Scenario comparison

LSP adopters

- - - Base scenario
- No fees
- Scenario 1
- . - Scenario 2
- Scenario 3
- - - Scenario 4

Profit

- - - Base scenario
- No fees
- Scenario 1
- . - Scenario 2
- Scenario 3
- - - Scenario 4

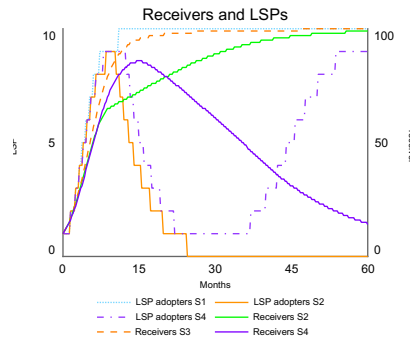

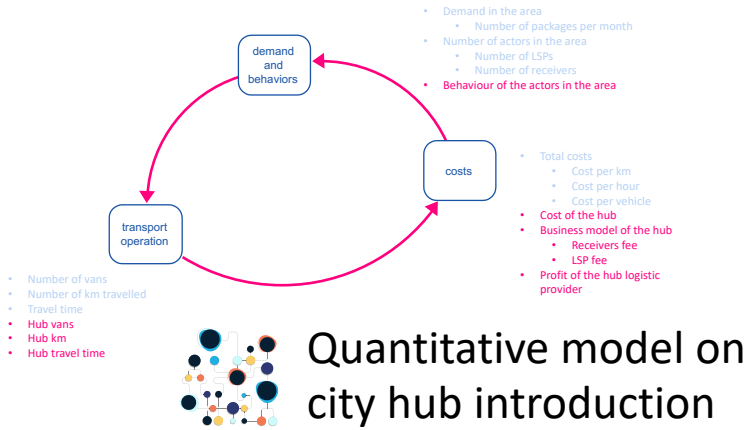

Initial investment needed

- - - Base scenario
- No fees
- Scenario 1
- . - Scenario 2
- Scenario 3
- - - Scenario 4

Conclusions

Scenario analysis considering different business models

Lower receiver fee if we include both actors... but it depends on knowledge!

Thank you for your attention!
